

Python – Ex1 – Basic Statements

Ex 1

Get from the user 2 strings and print the concatenation of them.

Ex2

Get from the user 2 numbers and check their sum. If it's big than 10, print "Big". Otherwise, print "Small".

Ex3

Get from the user 2 numbers and a string. If the sum of the numbers is greater than the string length, get 2 more strings from the user and print the longer of them.

Ex 4

Write a program that receives from the user numbers (one by one) until the first number that greater then 10 . At the end' print the total of them.
