

Python – Ex2 – Collections

Ex 1

You have the following structure :

[4, "Hello" , [True, "Avi" , [5,1,9,3]]]

Calculate the average of the numbers marked in yellow.

Ex 2

There is an array : [17,1,12,54,23,9,21]

Write a program the will calculate the sum of the numbers between 3-20 ONLY

Ex 3

There is an array : [17,1,12,54,23,9,21,4,87,11,36]

Write a program the will calculate the sum of all the ODD numbers

Ex 4

There is an array : [17,1,12,54,23,9,21,4,87,11,36]

Print the avg of the first half of the array values

Ex 5

- There is an array of arrays as follows :
[[32,15] , [1,7,12] , [8,14,6,11]]

Print the maximum total among the arrays

Ex 6

You have the following data structure :

```
{  
  "nums1" : [4,1,2,5] ,  
  "nums2" : [6,1,8,3] ,  
  "Student" : {  
    "Name" : "Avi,  
    "ID" : 111111,  
    "Grades" : {  
      "nums3" : [4,1,9,3]  
    }  
  }  
}
```

Print the bigger average between nums1 & nums3 values.
